HOW TO REMOVE AND REFIT BATTERY COVER

HOW TO REMOVE THE BATTERY COVER

Open the battery cover slightly, hold it with one hand, and give it a hard knock to the side

Do not twist the battery cover to remove it

WHY A BATTERY COVER?

The battery cover of the SCANGRIP CONNECT work lights is designed to protect the battery and obtain better IP protection.

The SCANGRIP CONNECT work light range is based on the previous SCANGRIP CAS work light range designed to fit CAS batteries only. Now, working with multiple and bigger batteries from all leading power tool brands worldwide, means that the cover cannot always be used and sometimes needs to be removed.

REMOVE BATTERY COVER?

As the removal of the cover is somewhat difficult for the first batches of the SCANGRIP CONNECT work lights, we have redesigned the hinge of the cover to make it smoother and easier to remove and refit.

MY BATTERY COVER BROKE... WHAT DO I DO?

If by accident, the battery cover gets damaged during the removal, we offer to provide you with a new one free of charge. Just contact us at: order@scangrip.com
